The master curve approach for assessing the fracture toughness of a sampled irradiated material has been gaining acceptance around the world. This direct measurement approach is preferred over the correlative and indirect methods used in the past to assess irradiated reactor pressure vessel (RPV) integrity. Guidelines for application of the master curve approach to reactor pressure vessel integrity in nuclear power plants. Vienna: International Atomic Energy Agency, p. ; 24 cm. (Technical reports series, ISSN ; no.) STI/DOC// ISBN 9200 Includes bibliographical references. 1. Nuclear pressure vessels. 2. The Pressure Vessel Research Council (PVRC) is presently investigating application of the Master Curve approach for implementation in the ASME Code. The Electric Power Research Institute (EPRI) is supporting development of alternative RPV integrity assessment approaches, which includes documentation of the technical basis for application of the Master Curve approach.
